- **Answer:** NOON.

Top Math Twisters and Their Solutions

Math twisters are often designed to mislead or challenge assumptions. Here are some classic examples with explanations.

1. The Classic "Counterintuitive" Puzzle

Puzzle: A bat and a ball cost \$1.10 in total. The bat costs \$1.00 more than the ball. How much does the ball cost?

Solution:

Initially, one might think the ball costs \$0.10, but that would make the bat cost \$1.10, totaling \$1.20, which is more than \$1.10.

Let's denote the ball's cost as x . Then, the bat's cost is $x + \$1.00$.

Equation: $x + (x + \$1.00) = \1.10

$2x + \$1.00 = \1.10

$2x = \$0.10$

$x = \$0.05$

Answer: The ball costs \$0.05, and the bat costs \$1.05.

2. The "He Can, She Can" Puzzle

Puzzle: A man and a woman are running a race. The man is twice as fast as the woman. They start running at the same time from opposite ends of a 100-meter track. When they meet, who is closer to the starting point of the man?

Solution:

Since they start at opposite ends and run towards each other, when they meet, they are equidistant from their respective starting points.

Answer: Neither?both are equally close to their respective starting points at the moment they meet.

3. The "Age Puzzle"

Puzzle: A father is three times as old as his son. In 5 years, he will be twice as old as his son. How old are they now?

Solution:

Let the son's current age be x . Then, father's age is $3x$.

In 5 years:

Father's age: $3x + 5$

Son's age: $x + 5$

Equation: $3x + 5 = 2(x + 5)$

$3x + 5 = 2x + 10$

$3x - 2x = 10 - 5$

$x = 5$

Answer: Son is 5 years old, father is 15 years old.

Categories of Math Puzzles and Their Features

Math puzzles come in various forms, each with unique characteristics and appeal. Here are some common categories:

Number Puzzles

These involve manipulating numbers based on certain rules or patterns. Examples include magic squares, number sequences, and digit puzzles.

Features:

- Focus on numerical patterns

- Often involve arithmetic operations
- Suitable for all age groups

Example:

Find the next number in the sequence: 2, 4, 8, 16, __?

Answer: 32 (doubling each time)

Logic Puzzles

Require deductive reasoning to arrive at the correct answer. They often involve scenarios or statements that need to be analyzed carefully.

Features:

- Emphasize reasoning skills
- May involve clues and elimination
- Suitable for older children and adults

Example:

Four friends?Alice, Bob, Carol, and Dave?are sitting in a row. Alice is to the left of Bob, and Dave is to the right of Carol. Who is sitting in the middle?

Answer: Bob or Carol (depending on the arrangement), but more details are needed for certainty.

Algebraic and Geometric Puzzles

These puzzles involve formulas, equations, or geometric concepts to find solutions. They often require setting up equations or visual reasoning.

Features:

- Involve mathematical formulas
- Encourage visualization
- Suitable for higher-level learners

Example:

A rectangle has a length that is twice its width. If the perimeter is 48 units, what are its dimensions?

Answer: Width = 6 units, Length = 12 units

Popular Math Puzzles and Their Solutions

Below are some classic puzzles along with detailed explanations and answers to illustrate problem-solving techniques.

The Missing Dollar Puzzle

Puzzle:

Three friends check into a hotel room that costs \$30. They each pay \$10. Later, the hotel realizes the room rate was only \$25 and gives \$5 back to the bellboy to return to the friends. The bellboy, unable to split \$5 evenly among three people, gives each friend \$1 back and keeps \$2. Now, each friend has paid \$9, totaling \$27, and the bellboy has \$2, totaling \$29. Where is the missing dollar?

Answer & Explanation:

The confusion arises from adding \$27 and \$2, which is incorrect because the \$2 is part of the \$27 paid, not in addition to it. The actual breakdown:

- Total paid by friends: \$9 each $\times$ 3 = \$27
- Out of this, \$25 goes to the hotel, and \$2 is kept by the bellboy.
- The remaining \$3 is returned to the friends (\$1 each).

The correct accounting:

\$25 (hotel) + \$2 (bellboy) + \$3 (returned) = \$30 total paid.

Key Point: The puzzle tricks you into adding the bellboy's \$2 to the \$27, which is misleading. The actual total is the \$25 plus the \$3 returned (which sums to \$28), with the remaining \$2 with the bellboy, totaling \$30.

The Crossed-Wires Puzzle

Puzzle:

You have two wires, each 100 meters long. One wire costs \$1 per meter, and the other costs \$4 per

meter. How can you make a 50-meter wire that costs exactly \$2?

Answer & Explanation:

Cut 50 meters from the \$4 per meter wire and 0 meters from the \$1 per meter wire. The total cost for the 50-meter wire is:

- 50 meters from the \$4/m wire = $50 \times \$4 = \200

This exceeds the budget, so this approach doesn't work directly.

Alternatively, consider connecting parts of both wires in series or parallel to create a 50-meter wire that costs exactly \$2 per meter.

Solution:

Use 25 meters of the \$4/m wire and 25 meters of the \$1/m wire:

- Cost of 25 meters of \$4/m wire = $25 \times \$4 = \100
- Cost of 25 meters of \$1/m wire = $25 \times \$1 = \25
- Total length = 50 meters
- Total cost = \$125

Cost per meter = $\$125 / 50 = \2.50 , which is more than \$2.

To get exactly \$2 for 50 meters, you need a mixture where the average cost per meter is \$2:

Let x be the length from the \$4/m wire, and $(50 - x)$ from the \$1/m wire:

$$(4x + 1 \times (50 - x)) / 50 = 2$$

Solve for x :

$$(4x + 50 - x) / 50 = 2$$

$$(3x + 50) / 50 = 2$$

$$3x + 50 = 100$$

$$3x = 50$$

$$x = 16.66 \text{ meters (approx)}$$

$$\text{Cost of the \$4/m wire part: } 16.66 \times \$4 = \$66.67$$

$$\text{Cost of the \$1/m wire part: } (50 - 16.66) \times \$1 = \$33.33$$

$$\text{Total cost} = \$100$$

Total cost for 50 meters:

$$(16.66 + 33.33) = 50 \text{ meters, costing approximately \$100, which yields an average of \$2 per meter.}$$

Conclusion:

By mixing approximately 16.66 meters of the \$4/m wire with 33.33 meters of the \$1/m wire, you can create a 50-meter wire costing exactly \$100, i.e., \$2 per meter.
